STORM WATCHERS— East Front Street in Nome bore the brunt of last week's storm that pummeled Northwestern Alaska. Curious Nome residents came out to watch the high water event and ventured beyond the barricades set up by Nome emergency services volunteers.

# Nome recovers after super storm

By Diana Haecker

There is nothing like a good-sized storm that gets Nomeites out on Front Street for a walk near the beach. As waves crashed over the seawall armor rock on East Front Street, depositing rocks, driftwood and other debris on the road, people came out in droves to view the spectacle and take video and photos of

the angry Bering Sea on a backdrop of a colorful sunset.

The high winds that battered Nome with peak gusts of 66 mph on Tuesday night had subsided by Wednesday afternoon. The Tuesday night blizzard blew six inches of snow on Nome, which accumulated in huge snowdrifts in some areas while other areas were blown clear

After the winds died down and visibility returned, the threat of a massive storm surge worried city officials most. Low lying areas like River Street, F Street and Belmont Point flooded. Dry Creek was wet and looked like a lake all the way to Chicken Hill. The storm surge peaked on Wednesday evening with

9.95 feet above the mean low water level. In comparison, a very high tide measures two feet above that level.

However, the anticipated severity of the massive storm did not materialize because the center of the 948millibar low moved further west over Kamchatka and the wind direction during the main wind storm shifted to the east, blowing across the tundra

as opposed to coming from the south as projected, which would have caused the water to surge much higher than it did. Jerry Steiger, meteorologist in charge at the Nome NWS said that the easterly winds pushed the storm-driven waves parallel to the shoreline. "We felt ex-

storm on Wednesday afternoon at Front Street.

# City declares disaster after Bering Sea storm hits Nome

By Sandra L. Medearis

The Nome Common Council is hoping that winds clocked at 66 mph on Nov. 9 along with a sea surge of 10 feet that produced flooding and evacuation of parts of Nome adjacent to the seawall and at Belmont Point will add up to emergency money coming from the state and federal sources to help pay for re-

Tuesday a federal and state team was to land in Nome to assess damage here and in the region to coordinate and ascertain the need for relief that could come in three forms: public assistance to repair public facilities, relief to individuals for damages to property and money to establish temporary housing.

Monday night in a special meeting, the Council talked to emergency relief coordination officials via telephone at a special meeting at Nome City Hall and followed up unanimously passing a resolution declaring a disaster delivered by the Bering Sea storm that wham-bammed Nome Nov. 8 and 9. The resolution holds the disaster concept only, City Manager Josie Bahnke said. True costs and complete costs of damage to Port of Nome, utilities and City facilities remain to be gathered. The resolution asks for money for estimates and cost refinement work.

The local declaration is the first step to money for storm cost relief; next, the state will consider a disaster declaration at that level. Even then, there is no guarantee that the Federal Emergency Management Agency—FEMA—will participate. The state Department of Transportation and public facilities will handle damage to the Nome-Council Road. If the damage exceeds \$1 million, federal highway programs will be-

# Villages hunker down to survive storm

By Sandra L. Medearis

The National Weather Service said Monday that villages on the northern and eastern coast of Norton Sound escaped heavy damages from last week's storm because the storm built up with winds from the east parallel to the shore and only started blowing from the south when the storm was weakening on its way out.

However, no village went un-

scathed in what was billed as the Bering Sea "superstorm' that brought snow and blowing snow with seas surging eight to 10 feet over normal. Whether the storm was a superstorm and whether it matched or exceeded the storm of 2004 remains in debate, but those who had responsibility for community safety services say the buildup in news reports pushed people to board up, evacuate vulnerable

areas and get supplies to prepare for the onslaught.

As the storm was winding up to sock it to the Seward Peninsula area Tuesday at midnight, the thermometers in most villages showed temperatures in the teens while NOAA weather site showed wind blowing from the east anywhere from 53 mph over Kivalina to mid-40s mph in Nome, Shishmaref, Wales, Brevig

Mission and Unalakleet, but in the teens and 20s at the other end of Norton Sound. Shortly thereafter, as the Bering Sea storm started to really beat on Western Alaska, winds gusted to 89 mph in Wales, 85 mph in nearby Tin City, and 75-76 mph in Savoonga on St. Lawrence Island and Cape Lisburne. Several Gambell

#### Letters -

Well, like Yogi Berra is supposed to have said, "It is Déjà Vu all over again." All the weather news about the big Bering Sea storm took me back 60 years to probably the only time in my seagoing career that I really was in danger of losing my life.

It was 1951 and I was a CPL in the Army Transportation Corps (at Nome that summer and fall).

Most of October we were over at NE Cape on St. Lawrence Island getting diesel oil ashore to the new DEW line radar site. I was running a little (36 ft.) motor tug and had a

Letters to the editor must be signed and include an address and phone number. Thank yous and political endorsements are considered ads.

West Virginia hillbilly named Raikes as my helper. A Navy tanker loaded barges, a larger tug, the Kotzebue brought them in and we put them on and off the beach for unloading.

OPINION

We left for Nome about Nov. 1 being towed behind two barges by the Kotzebue. We had been having trouble with water in the gas.

We ran right into one of those fall Bering Sea storms. After the second time our old manila towline broke I told Raikes "We have to get on to the Kotzebue and let this tub go.

I told Raikes that I would hold the

MT alongside the bigger tug and he was to dive over the rail. Then I would bring the MT back alongside with the steering wheel lashed over and I would dive for the rail and he was to grab me. The skipper of the bigger tug slowed down as much as he could and his crew helped us. I think I got wet feet out of it. But then we wandered around the Bering Sea and Norton Sound for a week before we finally got back to Nome.

Then I later learned that the Coast Guard had called my mother in the middle of the night to tell her I was

safe, and she hadn't even known I was lost. The Bureau of Indian Affairs vessel North Star had found the MT floating with no one aboard. We didn't think we were lost, we knew we were somewhere between NE Cape on St. Lawrence, the Yukon River Delta and Nome. But it was a big, stormy area.

Enough old peoples stories. Goodnight all, George F. Shaw Kenai, AK

## **Editorial**

#### The Storm With No Name

Nome came through a category #3 hurricane as the world watched. The increased use of social media put us in the spotlight. We showed the world how tough the communities of western Alaska can be. We've been through major storms before but without so much fanfare. The main reason we were able to come through so well is that we were well prepared.

The Weather Service put out the warnings days in advance. Nome's Emergency Planning folks went into action. Radio broadcasts alerted listeners of the approaching storm, folks followed its path on the internet. News alerts told folks how to prepare. The City of Nome's Public Works crews readied equipment, moved snow, gathered signs, got boats pulled to higher ground, prepared pumps and generators, made signs, readied sandbags and boarded windows. Volunteers and City crews moved items from the museum. Front Street business owners put plywood over their windows and secured anything that could be washed away by an angry Bering Sea. Residents moved garbage cans out of the wind and made sure they had enough food and batteries. Volunteer firefighters, ambulance personnel and snow removal crews stayed on alert, many kept a vigil at the Public Safety Building, fire station and power plant. Snowplows were ready to clear lanes for emergency vehicles. Nome Joint Utility crews were ready to handle downed power lines and arcing transformers. Nome Police were able to respond to folks who needed help and State Troopers were at the ready. The storm hit full force in the evening. Visibility dropped to zero and Nomeites hunkered down to weather the storm in comfort as they listened to the jet-engine roar of the pounding waves and the howl of hurricane force winds. Our houses shook and the power, cable and phone lines danced a frantic tango and one could imagine a speeding freight train passing overhead.

When the sun came up the next morning, Nomeites went out to inspect the damage and play in the wind. We came through one of the worst storms in our town's history and we did just fine thanks to the fact that we were well prepared for this storm and we have dedicated public employees and emergency service volunteers. Since this storm garnered so much attention it deserves to be called something other than "Bering Sea Storm." It qualified as a hurricane but typhoons and hurricanes get names. What are we? Let's name our storm. Any suggestions? - N.L.M.-

## Charlotte Brower wins North Slope borough runoff elections

By Diana Haecker

Unofficial results as of Monday, have Charlotte Brower winning the run off election for mayor of the North Slope Borough by 65 votes over runner-up George Ahmaogak.

Brower garnered 906 votes to Ahmaogak's 841 votes. The run-off elections were held on Nov. 8, after none of the six candidates received 40 percent of the votes.

According to a borough clerk,

there were 74 questioned ballots. As of press time, voter turnout numbers and invalid ballots were not yet determined. The run-off election results were canvassed on Tuesday, Nov. 15.

## Storm hampers search for Teller man

By Sandra L. Medearis

Teller people saw Kyle Komok setting out on a yellow four-wheeler ATV for the end of the sand spit north of town around 2 p.m. last Wednesday during last week's heavy storm. The narrow spit separates the sea from Imruk Basin.

By Monday this week, no one had seen or found Komok, 26, missing since Wednesday. Observers told Alaska State Troopers they had seen Komok riding his ATV in the waves. According to weather records, the sea on Nov. 9 reached a storm surge of eight to 10 feet.

A house-to-house search and a

search of a nearby lake by Teller Search and Rescue did not find Komok. Water on the road and violent weather at the peak of the storm postponed the Teller S&R search at around 9 p.m. until dawn Wednesday. On Thursday afternoon, weather cancelled the search. The rescue group did manage to get a couple of four-wheelers out to the spit and found the spit half-washed out and no sign of Komok. Searchers took a boat out on Grantley Harbor without

Komok could have been going to look at the waves or been on his way to a destination, Megan Peters,

Alaska State Troopers information officer said. Peters said Monday that troopers could confirm no theories until Komok or his remains were

Troopers stationed in Nome had been authorized to conduct a search of Imruk Basin when weather permitted, she said, but no report was available Monday. The harbor was searched the morning after Komok's disappearance, she confirmed, and points along the road from Teller to Nome had been searched for tracks to see if Komok had been picked up in a vehicle.

# Low-cost energy on Council shopping list

By Sandra L. Medearis

The Nome Common Council met in work session Monday, Nov. 14 to begin drawing up a list of legislative priorities to push through for funding when the state legislature meets to hash out a spending plan for 2012 capital projects and operations.

During the session, the panel consulted with City-paid lobbyists Wendy Chamberlain and Larry Martin. At the top of the tentative list,

three priorities came through loud and clear. At the top of the list, find money for water and sewer projects to support a grant application Nome Joint Utility System has into state Department of Environmental Conservation. Next, and a great big second, for the Council and NJUS, is a way to cut costs of energy in Nome area and Western Alaska.

Councilwoman Mary Knodel said the City needs to request money

through state energy agencies for the loan money and expert assistance to sort out available and appropriate local energy sources-natural gas from the land or sea, hydroelectric from the Teller area, geothermal energy from Pilgrim Hot Springs, wind— and to ferret out the answers at the local level and see which way to go, rather than wait for the state to do it down the road.

"I don't think we have that expert-

ise here. There must be someone, a guru. The Council has energy studies going back to 1978 showing gas seepage in Norton Sound 25 miles off shore and an engineering and economic analysis of natural gas production in the Norton Basin conducted by the Minerals Management

It's here. They drilled in 1984 and found the gas," Emmons said. "We don't need a handout from the state. we need a loan. It is the one thing that will keep people in western Alaska. That's bringing down the cost of energy. This year's PFD [\$1,174] bought 150 gallons of fuel

At the top of the list, find money for water and sewer projects to support a grant application Nome Joint Utility System has into state **Department of Environmental Conservation.** Next, and a great big second, for the Council and NJUS, is a way to cut costs of energy in Nome area and Western Alaska.

Carl Emmons, NJUS board member and advocate of development of natural gas or other cheaper energy, backed the idea with fervor. Saying the City needs to offset the high cost of energy now rather than later. The cost of energy was making people leave the community, he said. It was tough to hire people because they would lose their energy assistance and people could not exist here without energy assistance.

"It is getting ridiculous," he said.

oil. The cost of energy is a killer."

Rep. Neal Foster backed the idea, saying that the time was ripe to seek energy funds for rural Alaska while the legislature was pumping billions into the Susitna Dam project in southwest Alaska.

The Council was to continue work on the wish list that included needs for Port of Nome and Nome Public Schools. A regular Council meeting was scheduled for Wednesday, Nov.

## City declares disaster after Bering Sea storm hits

 $continued\ from\ page\ 1$ 

come involved.

Coastal and river flooding as a result, the resolution said, had an impact on all areas along the coastal waterfront, producing road and structural damage from high water and structural damage from the high winds throughout the Nome vicinity. The severity and magnitude of losses from the emergency went beyond the capability of local resources to cover response and recovery, the City maintained.

Nome Joint Utility System's manager, John K. Handeland provided a draft report detailing effects on the municipal water and power system, showing a preliminary total of costs at \$65,000, just one sector of City services that took on extra costs from the storm

Despite that high winds did not shift directly from the south to push the sea far inland, nevertheless, the surge flooded East Front Street,

River Street, West F Street, inundated the small boat harbor, West Beach Park, and required evacuation of residents along Belmont Point. The Snake and Dry Creek waterways threatened Seppala Drive, which City administration closed to traffic.

The new power plant, built above the 100-year flood plain escaped flooding, as did the old power plant protected by a protective earthen berm constructed before Snake River flooding during a fall storm in 2005. Crews had to respond to single transformer outages throughout the night and reports of downed lines, which turned out to be TV and phone lines. A power interruption affected the Triple Creek-Dexter areas for 16.5 hours and went out in a part of the town for an hour Wednesday morning when the wind wrapped airborne metal roofing around primary wires. The Rock Creek mine feeder stayed off for 33 hours, but their emergency generators took over to keep NJUS crews in town. City water continued to supply homes and businesses throughout the storm.

Storm water running into wet wells at the sewer and water treatment plant on River Street produced the potentially major issue when it overwhelmed the pumps, making 165,000 gallons of raw wastewater flow into the emergency discharge to the small boat harbor. Estimates say the wastewater became diluted when it mixed with approximately 864,000 of storm water before pumps could be restarted when water around the River Street facility receded and storm drains regained the ability to back water off the wet wells. DEC was informed and monitored the incident, Handeland said.

Handeland said it would take time to draw up a complete account of costs to the utility to prepare for and respond to storm issues, repair damage and clean up debris from the emergency.

Here is a preliminary estimate from the NJUS damage assessment:

Power plant-personnel, equipment costs and materials, supplies and fuel, \$10,500. The utility had extra costs to protect facilities and maintain power stability with personnel required for standby in advance of zero visibility weather conditions.

Line distribution-personnel, equipment and materials, supplies and fuel, \$29,500. The storm caused extra costs for response to outages, reports of wires down and repair of service drops and wire spans.

Water and sewer operations and construction - \$21,000. Extra expense came from protecting facilities, installing barricades and responding to equipment stoppages caused by extensive flooding. Following the storm, crews had to clean up storm-strewn debris

Administration, \$3,500. Unbud-

geted costs resulted from having to prepare, monitor and coordinate response activities, respond to customer calls, document and track costs associated with emergency response efforts.

Lost revenue from Rock Creek feeder outage, \$3,500.

Again, so far, the preliminary cost estimate for NJUS damage assessment comes to \$65,000

Mayor Denise Michels expressed thanks to the Alaska Rescue Coordination Center for their outreach to the community of Nome and commended community agencies and volunteers who worked throughout the storm to preserve safety.

"What a way for a community to come together," in a crisis, she said.

# District Improvement Plan driven by data

A 2011 District Improvement Plan meeting on November 10 brought together an impressive think tank including both the elementary and high school principals, the superintendent, the business manager, school board members, teachers, PTSA leaders and a school counselor. Jon Berkeley, director of federal programs, presented some interesting data as he encouraged questions and input before preparing a District Improvement Plan to be submitted to the State. The plan is required due to Nome Public School's status with Adequate Yearly Progress (AYP).

Berkeley began his presentation citing efforts made at the elementary level to improve scores, which included a focus on the Read 90 program. A math intervention teacher has been reassigned to Read 90 duties, and instructional aides have been trained and reassigned to Read 90. There has been training of all staff in the Reading Mastery Intervention Program. In addition, the AP3 Grant (preschool pilot program) continues for year three which has placed two certified pre-kindergarten teachers at the Kawerak Head Start building.

At the junior and senior high level, several changes or additions have been implemented including the successful APEX credit recovery program, a seven period school day, an addition of one counselor (two total), and additions of a small engine repair and junior high art class. CTE (Career and Technical Education) classes are "in the works" to keep older students interested in school as well.

Both school sites are also driven by the Nome Public Schools Strategic Plan.

Berkeley's data compared cohort groups of students that took the MAP (Measures of Academic Progress) in May 2011 and again in October 2011. Most groups showed no movement, up or down, which made sense since there isn't much instructional time between May and October. However, each group of students had its own personality.

This year's third grade students showed 60 percent scoring below proficiency at reading. Contrast that to the current fourth graders, who only had 40 percent scoring below

proficiency reading. What could explain the difference? Janeen Sullivan, counselor, suggested the idea that this year's fourth graders are almost 2:1 girl to boy and girls tend to outscore boys on tests.

Then there were last year's fourth graders, this year's fifth graders - 89 percent of those 37 students were reading below proficiency in October. Berkeley pointed out that ten students, all who read at or above proficiency, were not included in that cohort group due to a transfer to the Anvil City Science Academy at the end of their fourth grade year.

And the students with the most dramatic data would be last year's fifth graders, this year's sixth graders. In May 2011, 72 percent were reading below proficiency and that same group in October tested at 56 percent below proficiency, a 16 percent decrease. Summer school and the strength of the new 56'ers program may account for some of that growth in reading.

Overall, there was a 2 percent increase in reading proficiency of the matched cohort —160 students from spring 2011 (then grades 2-5) to fall 2011 (current grades 3-6). "It's an improvement. We'll take it," stated Berkeley.

Graduation rates were also discussed. In 2009, the NPS graduation rate was 71 percent, in 2010 it was 73.2 percent and in 2011 it was 65.7 percent. Apparently the formula to determine the rate may be more complex than one might imagine. It involves division with the numerator being the number of graduates receiving a diploma (certificates of achievement don't count) divided by the number of ninth graders four years prior. To make the percentage appear worse, any ninth grader who drops out and later receives a GED will not be considered a graduate four years later in the graduation rate. One bright spot is that the state does calculate another graduation rate for each group of ninth graders after five years and accepts the best percentage for the rate.

Berkeley also shared 6th grade drop out indicators: Poor attendance

- Has failed or is currently failing Language Arts and/or Math
- Demonstrates behavior issues

- Has limited home support
- · Likely to have repeated a grade
- Likely to have a reading deficit that has not been diagnosed
- Likely to demonstrate problems in managing time, workloads, and
- Likely to become disengaged in

(t's

He explained that if a sixth grade student could be identified with four or five of these indicators, it was a strong predictor of drop out poten-

Attendance was another topic at the meeting. Berkeley said the district's attendance rate was about 90 or 91 percent. "Our attendance rate has been pretty good. It's just a small population of chronic truancies....well... absenteeism, whether it's unexcused or excused.'

Berkeley explained that he planned to focus on three areas in the District Improvement Plan: Read 90 program, graduation rate and reducing dropouts.

## School Board prepares legislative priorities

By Lori Head

The Nome Board of Education held a special meeting on November 10 to discuss and approve legislative priorities. Board members Betsy Brennan, Barb Nickels and Jennifer Reader were present.

With the guidance of Michael Brawner, NPS superintendent, the school board determined four FY 12 priorities:

Protection Systems – It is estimated to cost \$283,000 to bring building "D", which houses Anvil City Science Academy (Charter School), Dept. of Transportation offices, NPS district offices and the superintendent's quarters into building code compliance with fire alarm upgrades and a sprinkler fire suppression system. Last year's NPS priority of a sprinkler/fire alarm upgrade was awarded \$90,000 by the Legislature, which should cover the cost of the design and a portion of this FY 12 priority.

Nome Elementary School Gym Floor Replacement - Brennan commented that this priority has been on the list for approximately five to six years. The estimated cost is between \$100,000 and \$160,000. A company that specializes in school gym flooring indicated a new floor industry standard shock resilience value is approximately 14 percent, and the NES gym floor has approximately a 3 percent value due to its "extreme age." Considering the constant use during school, after school and for community events by Nome organizations, a new gym floor would be

an excellent investment and impact many residents.

Lighting Upgrade to the Nome Elementary School — This priority would replace existing, expensive, high energy consumption lighting with energy efficient LED equipment, according to a letter Brawner sent to Josie Bahnke, Nome City Manager. The estimated cost to replace all equipment would be the energy saving lights at \$72,063. Brawner wrote to the City, "Please consider funding this project with this year's Community Benefit Share." The Community Benefit Share Program is a \$100,000 remittance made to municipal governments from Norton Sound Economic Development Corporation to each of its member communities.

Nome Beltz High (NBHS) HVAC Direct Digital Control (DDC) Project Phase II — This priority is an extension of work completed at NES where DDC technology controls all aspects of the environment and hot water heat. Due to recent renovations, the NBHS gym and cafeteria are under the DDC system. However, the rest of the school needs to be updated so that energy and maintenance savings can be realized. The estimated cost of this priority is \$250,000 to

These four facility priorities, along with other joint priorities with Alaska Association of School Boards, were submitted to the Nome Common Council on Monday, November 14.

STORM WAVES— The water rose 9.95 feet above normal in last week's super storm that hit Northwestern Alaska. Ocean debris littered Front Street and the Nome-Council Highway.

## Nome recovers

continued from page 1

extremely fortunate that the winds didn't turn to the straight south," said Nome Joint Utilities manager and lifelong Nome resident John Handeland. "If so, we would've been in a world of pain."

In Nome, Snake River Valley, Dexter, Banner Creek and Triple Creek no storm related deaths or injuries were reported. Even so the full picture of damages has not been assessed yet at press time. Some storm casualties include washed out sections of the Nome-Council highway, some damage to the Mini Convention Center, the destruction of a construction staging weather port at the new hospital site and the loss of a roof that flew off Jim Simple's

NJUS manager John Handeland reports that storm water seeped into the sewage holding tanks. Pumps designed to pump sewage out of the underground holding tanks to the sewage lagoons couldn't keep up with the sheer volume of liquids. With the storm water rushing in from the surface, the pumps couldn't keep up and NJUS turned them off for 12 hours to prevent them from burning out. 165,000 gallons of sewage water mixed with storm water and ended up in the small boat harbor. NJUS reported this to the State Department of Environmental Conservation and city emergency personnel. The pumps were turned on again on early Thursday as the storm water subsided.

Power went out in the city when on Wednesday morning a piece of metal roof flashing flew into primary power lines near the Carrie M. McLain Museum. The outage lasted for almost two hours. The longest outage concerned residents of the Beam Road, out to Dexter and Banner Creek. The outage lasted for 16 hours from 2 a.m. on Wednesday morning until 8 p.m. Newton and the Anvil Mountain area also lost power for four hours.

For a while, telephone services were down as the city phones, police phones and private phones were out of order for a short time. However, TelAlaska, through a spokesperson in Anchorage, said that technicians monitored the situation for 24 hours and that there were no known outages to local services at all.

Phone service was also interrupted when the front of a building on First Avenue was blown off by the storm and ripped a phone line.

#### Nome is storm ready

As soon as the National Weather Service alerted western Alaska that a massive storm was brewing in the Bering Sea on Monday, city officials started to get ready. City officials, emergency services and all major players met to plan setting up the incident command center.

On Tuesday at 8 a.m. the Incident Command was ready to roll, with acting city manager Chip Leeper, in absence of city manager Josie Bahnke, at the helm as the incident commander. Operations Chief was Jim West Jr., Planning Chief was police boss John Papasodora; harbormaster Joy Baker acted as Logistics Chief; and Tom Vaden was in charge of safety.

Steiger, also a volunteer firefighter, said that if anything, this event proved that Nome has the designation as a storm ready community for a reason. From the perspective as

## Villages hunker down

continued from page 1

residents, also on St. Lawrence Island, said Gambell usually is windy, but that the sea was very high Wednesday noon. The NWS reported gusts of wind at 76 mph early Tuesday evening.

Little Diomede, near the center of the storm, had winds that started off at 47 mph Tuesday night and gusted to over 100 mph at the peak of the

storm Wednesday.
"It was scary," said Kara Kazing-nok of Diomede. "A two-story house

was really shaking. "
The storm surge flooded the water treatment plant that is near water's edge and damaged the door, she said. Over the weekend, crews were cleaning the floor littered with trash carried in with the water and working to get water flowing again.

The village was prepared.

"Before the storm we had a community meeting," Kazingnok said. "We were ready for it. We pulled the boats off the beach away from harm.

Water moved Connex vans around Diomede, according to Samantha Menadelook, village clinic employee. Construction workers from the school project helped to move unused oil tanks from being tossed around. Although power was turned off in the community for safety, the clinic used its backup power. Menadelook set up a backup clinic on higher ground. "It was real windy. I took a trauma bag up to the

city office in case we had to close the clinic," Menadelook said. The storm damaged part of the foundation of the fire department building, she

Teller may have had the only death in the storm. Kyle Komok, 26, disappeared Wednesday Nov. 9 and has not been found. Komok was last seen driving a four-wheeler in the bashing the town. Searchers on four wheelers and by boat have been searching the area. During the storm, water surrounded the older, lower part of

town, and residents were urged to evacuate to the higher new housing area. Water filled low areas around the clinic and the school.

In Golovin the GCI facility was submerged, but Monday the village clinic had a landline. Clinic employee Ruthie Peterson said Internet had been out but had been restored over the weekend. Downtown areas very close to the clinic, but water was receding, Peterson said. Several

BOARDING UP - In preparation for the storm, Nome bsuinesses and residents on Front Street boarded up their windows. Nils Hahn protects The Nome Nugget publishing building's window to withstand flying de-

EROSION—Most of the storm damage in Shishmaref came from the wind. The west end of a seawall, still in construction stages, sustained damage and residents fear the work will be destroyed while the village waits for funds to complete the work sorely needed to fortress the village against further damage from the stormy Bering Sea. The village sustained loss of buildings in the storm of 2004 and sits precariously close to the ocean due to aggressive beach erosion.

## Villages hunker down

continued from page 6

families who could not get to their houses found sanctuary with relatives. Unfortunately, Peterson said, ice driven by the wind and sea surge onto a campsite six miles northeast of Golovin had damaged cabins and fish racks. Peterson expected FEMA representatives to arrive Tuesday to

further assess the damage.

In Koyuk, people lost their fish racks again, as happened five or six

Several villages shut off water, power or both to protect their sources as floods rose. Diomede turned off water, as the water treatment plant is near the beach. Elim also turned off their water source as a creek rose

near the well.

On the Native Village of Unalakleet Facebook page residents could read a warning to seek shelter at the school during daylight hours Tuesday, with the clinic and district office as backup shelters. Law enforcement officers would stop people from going to unsafe areas, the announcement said. Vans helped to evacuate

elders and others without transporta-

Shaktoolik and Stebbins had clinics closed as water rose and winds strafed the village with gusts to 64 mph Wednesday.

The hurricane class storm did not materialize because the wind did not reach predicted velocities and blew parallel with the coast rather than

Visit The Nome Nugget online

at www.nomenugget.net

making a perpendicular, direct rush from the south, and because the center of the storm was further west than predictions. Therefore, the storm did not exceed the storm of 1974 in ferocity, so its record stands, is what folks are saying around the cracker barrel this week.

continued from page 6

a fire department volunteer, Steiger said the fire department was standing by and helped the city by closing off streets near the coast. "We had six to 12 people at the fire hall to be ready for most of the event and then scaled it down to three people," said Steiger.

Operations Chief Jim West, Jr. said that one family from Belmont Point chose to evacuate to the Rec Center, which was the official shelter. The fire department was ready for the worst, standing by with a loader in case of a fire, which was the worst fear of emergency responders. But as the storm ripped through Nome at night, emergency responders only received one call that turned out to be

Incident commander Chip Leeper said that all through the night the command center—located at the new Public Safety building— monitored the situation. "It was good to be out there, away from the hub-bub of the excitement," said Leeper. Ambulance and fire fighter volunteers were staged at the ambulance barn and Fire Hall, to cut down on response time if something should happen.

Tom Vaden, in charge of safety, said that in the past the worst fires in Nome occurred around this time of the year and his main concern was a fire event that combined with high winds would've been a disaster.

But all in all, Vaden, said things went well. He echoed Jerry Steiger's sentiment that Nome is a storm ready community. "There is this attitude of preparedness," Vaden said. "I think Nome is storm ready and that is a big

Front Street businesses were ready for the worst and equipped to battle storm water entering the basements. Tony Parsons with the Bering Straits Development Corporation said that the weather service warnings gave him ample time to prepare

for one of his clients, the Wells Fargo Bank, to get pumps and generators in place prior to the actual storm surge. Breakers Bar's Ron Lock said that at times they were ankle-deep in water seeping into the basement, but nothing worse than a few boxes of garbage bags got wet. Lock said he was thankful for all the people that showed up and helped bailing out the water, bringing extra water pumps. "It was a community effort," Lock said. "There was a time when it looked like Mother Nature was going to win this, but then it backed down,' Lock said.

Anchor Liquor owner Mark Sackett said he and his crew worked pretty much all night to pump water out of their basement. "It felt like we pumped 100 gallons out and at the same time, 800 gallons came in,"

continued from page8

Sackett said. But luckily, he said, there is no damage to speak of.

Wednesday evening saw the worst of the wave action pounding the shoreline. Just before sunset, people went for a drive to see the debris piling up on Front Street. East Front Street, and the first few miles of the Nome-Council Highway east of the Nome Bypass Road were also littered with rocks, tree stumps and dirt. As the storm had passed and the ocean calmed down, the incident command center stood down on Wednesday night.

By the time the first sunrays touched Front Street on Thursday mid-morning, there was not a rock left on the roads. The city's Public Works crew cleared Port Road, which was also flooded, and pushed thick plates of ice off the east side of the inner harbor and F Street. Department of Transportation crews fired up their graders at 6:30 a.m. and before people got on their way to work, the roads were cleaned up.

DOT personnel went on an aerial survey to assess the damage to the Nome-Council Highway and report a clear single lane from Nome out to Safety, about mile 25. Beyond that the road is impassable, both from winter conditions as well as huge amounts of debris from the storm. Through DOT spokeswoman Meadow Bailey, the local crew report, "There are large sections of road that appear to be washed out and some that simply is not detectable due to the enormous amount of beach gravel and sand covering the roadway. Damage is considerable, we will need to conduct a thorough assessment to identify our needs to repair or reconstruct this

They report large washouts and very large riprap washed up onto and over the road surface.

Initial assessments show that the area's airports are operating and did not sustain significant damage. Unalakleet had very high water and

may suffer some washouts along airport property but the operating surfaces are fine. A few others will need further assessment as standing water drains away. "Overall, we're in good shape on the airports thanks to both state and contractor preparedness." DOT spokeswoman Bailey said.

Even before the storm was over, a different sort of onslaught hit Nome. Media requests for interviews, photographs of the storm and sensational video footage bombarded the city's emergency services administrator and The Nome Nugget. At the Nugget, the phones rang off the hook, fielding requests by international media like Al Jazeera from Dubai to national media CNN, L.A. Times and various news and photo agencies.

While schools had early dismissal on Tuesday, school was out on Wednesday and back in session on Thursday. The stores were open on Wednesday again and life went back to normal on Thursday morning. Many compared the storm to the storm of 1974 or 2004.

A bar keeper at the Board of Trade said that the city didn't even know what was coming their way in 1974. But now, technology allows for better forecasting tools and the fact that previous storms taught town residents and city officials to be prepared.

Jim West, Jr. said that the storm was equivalent to the '74 storm, but back then, the high water was recorded at 14 feet above the mean level. West, Jr. summed up the collective sentiment when he said, "We got lucky. If the winds would've come from the south, that would've put us in a real predicament."

Coping now with the paper work that comes after the storm, city officials are starting to tally up the damage, "We survived the storm of 2011 and hope that it is the last for this century," said Handeland.

FRAGILE— Museum employee Cheryl Thompson moved exhibits and artifacts by the boxful back into their place, on Thursday after the storm. Museum staff and volunteers had moved all items out of the museum located in the basement of a building on Front Street before the storm hit.

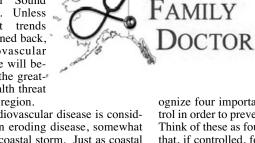

# Lowering your risk is like building a seawall

By Bob Lawrence, MD Alaska Family Doctor

Cardiovascular disease is the leading preventable cause of death and disability in the United States. According to the American Heart Association, Americans spend more on treating heart disease in all its forms than they spend on any other health

care problem. The effects of this devastating wave have reached the Norton Sound region. Unless current trends are turned back, cardiovascular disease will become the greatest health threat to this region.

Cardiovascular disease is considered an eroding disease, somewhat like a coastal storm. Just as coastal storms erode beaches and threaten to damage towns and villages, heart disease slowly erodes almost every major body organ including the heart, brain, kidneys, eyes, and

nerves. High blood pressure, obesity, diabetes, and harmful cholesterol are like the waves in this eroding disease. They cause damage gradually, sometimes for decades as symptoms develop.

To some extent, preventing heart disease is like building a seawall to protect the organ systems of the body

ALASKA

against this eroding disease. Experts from the A merican Diabetes Association, and the Center for Disease Control and Prevention rec-

ognize four important areas to control in order to prevent heart disease. Think of these as four big vital signs that, if controlled, form a protective wall against the cardiovascular storms that threaten the heart and brain.

**1. Blood Pressure.** Research shows that people who follow their

home blood pressure readings and take appropriate measures to keep their blood pressure in a healthy range significantly reduce their risk of having a heart attack, suffering a stroke, or developing kidney failure.

According to the American Heart Association, a healthy blood pressure goal is lower than 140/90 for an otherwise healthy individual. A lower goal of 130/80 is recommended by the AHA and the National Kidney Foundation for anyone with known heart disease, history of brain vessel disease, or signs of kidney disease. The lower goal of 130/80 is also recommended by the American Diabetes Association because diabetes is considered a cardiovascular disease equivalent.

2. Blood Sugar Level. Blood sugar, or blood glucose, measured after an eight-hour fast provides helpful information regarding a person's risk of cardiovascular disease. The risk of heart and vascular disease increases exponentially as fasting blood sugar increases above 125 mg/dL (the level that defines diabetes mellitus II).

People with diabetes should check

their blood sugar daily, if not multiple times daily. People who are at an increased risk of diabetes due to obesity, heart disease, or a family history of diabetes should monitor their fasting glucose annually under the guidance of a physician. The American Diabetes Association also recognizes the Hemoglobin A1c test as an alternate way to monitor the average blood glucose over a three-month period.

**3.Body Mass Index.** Researchers follow the body mass index (BMI), a ratio of weight to height, to determine a person's risk of developing cardiovascular disease. A BMI between 18.5 and 24.9 is considered healthy. A person with a BMI between 24.5 and 29.9, considered overweight, has an increased risk of weight-related problems. A person with a BMI of 30 or above (for example, a 5 foot 10 inch person over 210 lbs) is defined as medically obese with an increased risk of developing cardiovascular disease.

**4.** Cholesterol and Triglyceride Levels. Knowing the level cholesterol and fat in the blood is important because the pattern of having a low

HDL (good cholesterol) and high triglycerides is called dyslipidemia, a pattern known to be associated with underlying problems in the cardio-vascular system. In general, the healthiest pattern is a total cholesterol less than 200 mg/dL, with an elevated good cholesterol (HDL) above 45 mg/dL in men and above 55 mg/dL in women, and a triglyceride level below 150 mg/dL.

These numbers provide valuable feedback regarding a person's current health status and future risk of developing heart disease. They are often provided as a part of an annual exam. Over time, a general trend in the numbers can show whether a person is becoming healthier, becoming less healthy, or maintaining current overall cardiovascular health.

Most people find these numbers can be improved for the better, often dramatically, with attention to a healthy diet, daily physical activity, and avoidance of harmful behaviors like smoking.

Knowing these numbers is the first step towards protecting the heart from the harmful, often expensive, effects of cardiovascular disease.

## **All Around the Sound**

New Arrivals

Donna Pushruk and Neayuk Ahvakana of Teller announce the birth of their son **Ahnorak Ulugaq Ahvakana** born September 23 at 6:03 a.m. at Norton Sound Hospital. His proud sister is Lallaurauq, 1. His maternal grandparents are Brenda Pushruk and Delbert Okbaok of Teller. Paternal grandparents are Emma Ahvakana of Noatak and Ronald Ahvakana of Barrow.

Irene J. and Ashley L. Moses of Elim announce the birth of their daughter **Maya Charlene Moses**, born October 30 at 11:23 a.m. She weighed 8 pounds, 1 ounce, and was 19 ¾" in length. Her brother is Kealan Moses and her sister is Haley Moses. Her maternal grandmother is Elizabeth Kavairlook of Koyuk. Her paternal grandparents are Ruth Moses, and the late Mischa Moses, of Elim.

Lisa H. and Russell M. Saccheus, Sr., of Elim, announce the birth of their daughter **Hilary Joy Saccheus**, born November 3 at 3:55 p.m. She weighed 7 pounds, 9.2 ounces, and was 20" in length. Her siblings are Shane, 18, Russell Jr., 10, Elijah, 7, and Marelda, 4. Maternal grandparents are Wallace and Christine Amaktoolik of Elim. Her paternal grandmother is Helga Saccheus, of Elim.

Lee Ann and Louie Green, Jr. of Nome proudly announce the birth of their son. Emmett Havden James Storm Kayouktuk Green. He was born on November 7 at 7:55 p.m. at Providence Hospital in Anchorage. He was 7 pounds, 6 ounces and 20.5 inches long. His siblings are Louis, 26, Bryce, 22, Iris, 19, Shayna Warnke-Green, 9; Ahsaiya, 16, Hannah, 13, Elizabeth Alowa, 11 and Michael Green, 3. His paternal grandparents are Louie Green, Sr. and the late Angeline Bahnke-Green of Nome. Maternal grandparents are Randy and Geri Hoogendorn of Nome. come Kayouktuk!

Emmett Hayden James Storm Kayouktuk Green

#### **Power Saver**

Arctic Broadcasting Association, Inc., licensee of KICY, has announced the installation of new power saving technology. Through an experimental license granted by the Federal Communications Commission in July of this year, KICY has installed the Harris acc+ circuitry into their DX50, a 50kw AM broadcast transmitter.

Simply stated, the circuitry turns down the AM carrier in times of si-

lence. There were concerns about diminished audio quality in the station's fringe coverage area, but it appears those fears were unfounded. The first day of testing, a listener called from Anchorage, nearly 550 miles to the southeast of Nome and commented on the excellent signal strength and audio quality. There have been subsequent listener calls and positive comments from as far away as Bristol Bay.

The first power bill from Nome

Joint Utilities has just arrived and there is additional good news. Doubling the power, while the new acc+circuitry was switched on beginning September 22nd, actually produced a reduction of overall power usage and savings of nearly \$1,500 for the four weeks in the billing cycle!

"This represents a huge savings for us as energy costs continue to escalate in Northwest Alaska," stated General Manager Dennis Weidler. "With base costs, fuel adjustment costs and peak demand charges, we are currently paying over 35 cents per kilowatt hour here in Nome. When operating a 50,000 watt AM station 24 hours a day, those costs were becoming staggering. This new acc+ circuitry is an answer to prayer."

# **NSEDC News**

By Dan Harrelson, NSEDC Chairman and Don Stiles, Siu Alaska Corp. Chairman Courtesy of Communications Director, Tyler Rhodes

As long as there has been a Norton Sound Economic Development Corporation, one individual has been pointing fingers and throwing accusations without any regard to the truth or consequences of his actions.

We at NSEDC and Siu Alaska Corp., however, must be held accountable for our words and deeds. It is a standard we willingly accept.

NSEDC ordinarily declines to respond to this individual's rants for a number of reasons. A response gives the letter-writer the attention he craves and somehow lends validity to his nearly weekly, tired tirades.

He has sued NSEDC in the past, is currently involved in litigation against

NSEDC and has frequently threatened future lawsuits. This type of behavior

does not leave us eager to engage the individual in conversation or a public debate in the newspaper.

But there comes a point when the false allegations and misinformation must be addressed so that readers do not start accepting this individual's misguided and often untrue statements as fact. The following answers some of the

more outrageous claims he is currently leveling at NSEDC. **LIE:** Siu Alaska Corporation lost millions of dollars in 2009

**TRUTH:** Siu Alaska booked a net profit in 2009 of \$2.7 million. The assertion that Siu lost \$4.2 million in 2009 is categorically wrong. Siu actually booked, before taxes, a net income of \$2.7 million in 2009 and \$5.8 million in 2010. Siu is on track to again be profitable in 2011. As an entity in its first years of operation, Siu invests its profits into assets that will, in turn, produce profits. As Siu builds its asset base, it will pay dividends back to NSEDC, its one and only shareholder.

MYTH: Siu stands to lose millions by investing in the shoreside pollock fleet

**TRUTH:** Siu is on track to realize a return of approximately 20 percent on its investment in Alaska Boat Co. this year.

Siu's investment in the Alaska Boat Co. vessels has proved to be a wise business decision. Far from losing money, the investment has yielded a phenomenal return that will likely top 20 percent in the first year. The vessels harvested their quota well before the season's end during a year when many other vessels were unable to catch their total quota. The Alaska Boat Co. vessels achieved this success while nearly completely avoiding the bycatch of Chinook salmon and predominately performing well in regard to chum bycatch in a year when chum were present in high numbers throughout the fishing grounds. The Alaska Boat Co. fleet is well-managed and in good condition to fish far into the future.

**MYTH:** Siu's investment in shoreside boats shows it doesn't care about bycatch. **TRUTH:** By investing in the shoreside fleet, Siu has the opportunity to

reduce that sector's impact on salmon returning to our communities.

Siu was well aware of the shoreside fleet's bycatch rates before making this investment. These boats would be fishing whether Siu invested in them or not. By being involved with this sector, Siu has the opportunity to further improve the performance of boats that already had a good reputation in terms of bycatch. This season's results prove this out.

According to plan, the Alaska Boat Co. vessels harvested their quota before the time period when Chinook salmon are more present in the fishery. Chum salmon showed strong returns in rivers this year and were present in high numbers in the pollock fishing grounds. The entire fleet had trouble avoiding chum this year, including a couple of the Alaska Boat Co. vessels. Despite their best efforts, a couple of boats ended up with tows that resulted in higher numbers of chum. Whenever this occurred, our boats moved to

avoid salmon or stopped fishing altogether. Even so, based on a synopsis of weekly reports this year, Alaska Boat Co. vessels averaged a single chum salmon for every three metric tons of pollock they harvested this season. This is an average that is approximately 20 percent better than the chum bycatch rate for the rest of the shoreside fleet.

LIE: Information on Siu's finances is not disclosed to NSEDC board members

**TRUTH:** NSEDC board members receive financial statements related to Siu both in person and in the mail.

Several members of NSEDC's board of directors sit on the Siu board. In addition, all NSEDC board members are presented with a separate Siu Alaska Corp. financial report at the time NSEDC's audited financial statements for the year are produced. They received and reviewed a preliminary version of this report in person at a meeting this May. The final version of the numbers was mailed to each board member in June.

**MYTH:** Bycatch by the pollock trawl fleet is destroying salmon returns to Norton Sound.

**TRUTH**: The National Marine Fisheries Service estimates that bycatch by the pollock fleet takes less than 1 percent of the chum salmon returning to Western Alaska.

Federal studies have estimated that bycatch by the pollock fleet over the last 15 years has taken an average of 6 out of every 1,000 chum salmon returning to coastal Western. That's an average of 0.6 percent.

# Breakers and crew weather the storm

The evening of Thursday, November 3 I checked my email as I usually do when I get home. There was one from Judy O'Donnoghue from Kodiak telling me of the news of the passing of Ruth Brechan. I only met Joe O'Donnoghue late this July in the Breakers as he and his wife trav-

eled to Nome to see what we were like. We spent the evening reminiscing old Nome, old Alaska, and a common friend of ours, old Ruth. Ruth Gottschalk Brechan, as I knew her. had sold her Breakers Bar to my first husband and me in the early 1970s. Ruth and I kept in contact over the years, and I knew she was working on writing her life story, which she hoped to publish before she died.

In 2006 I sent her a copy of a Nome article out of a Saturday Evening Post magazine I found on EBay, which featured her, and the Breakers. The photo from that article I sent her graces the back of her book

which she did get published early this year called Trails and Tales of a Pioneer. I called the bar Friday morning and shared the announcement with Tony. I doubted there was any one there who would remember Ruth Brechan. Here's to you, Ruth, I thought, and in my mind hoisted a glass of good cheer. You were a

grand ol' gal for Nome, and Kodiak, and Alaska. This one's for you.

Laying on my couch Sunday evening, November 6 watching the news, bringing my ringing phone closer to my ear I was hearing the unmistakable drawl of my friend Joy.

ENERGETIC - Ezekiel Tenhoff shows off his vocal abilities and prowess on the guitar at the Open Mike at the Mini Nov. 12 in Nome. The event served as the season kickoff for the Nome Arts Council and a fundraiser for the Nome Midnight Sun Folk Fest.

### **More NSEDC**

continued from page 12

While by catch by the pollock fleet makes up a small piece of the complex puzzle of factors that affect salmon returns, NSEDC's board, staff and partners are united in seeing that impact further reduced. A plan is in the works to reduce the pollock fishery's impact on chum salmon, which is not the case for other fisheries that intercept several times more chum than that taken by the pollock fleet. As this process continues at the federal level, NSEDC and Siu are supportive of measures that will make a real and significant impact in reducing the bycatch of fish that are bound for our rivers.

LIE: NSEDC and Siu actively work to hide information from the public. **TRUTH:** NSEDC and Siu give the public updates and information throughout the year. NSEDC sends newsletters and annual reports to every mailbox in the region every year. NSEDC and Siu also distribute press releases and announcements on their websites. NSEDC has offices in Nome and Unalakleet, and has community outreach liaisons in the remaining 13 member communities. As a regional nonprofit, NSEDC recognizes its responsibility to inform the region's residents about its operations and the opportunities it creates. Unlike many other similar organizations, NSEDC chooses to keep its board meetings open to the public and announces them in the newspaper. NSEDC and Siu also operate in the highly competitive, for-profit world of commercial fishing. This requires that some information remain privileged, often in order to protect the interests of our partner com-

## Breakers and crew weather the storm

continued from page 13

"Cussy, NOAA weather is describing this as a monster, major." Joy Baker, our Port of Nome harbormaster, ever vigilant with her watchful eyes and ears, concerned for the exposure and protection of our assets, our town, knows what a worry wart I am when it comes to storms, high water, and the Breakers Bar. I got up, and printed out the area forecast discussion to read. There was much comparison to the 1974 storm. "In a few words...the origins and paths of these storms are slightly different...but their destinations are the same." Damn, I thought. That would be the Breakers.

My memory is still vivid of 37 years ago, November 11. I had the day off from my regular job, and spent 12 hours driving taxi for Yellow Cab along with my co-worker Edna Buffas during the onslaught of that catastrophe. The tales of that event are many, and long. The back south end of the Breakers Bar building was destroyed, and the pool table ended up at the center post of the bar. Then, in the 2004 storm, Breakers sustained considerable damage, and we lost the entire fall barge order of inventory Herbie Locke had just put away. Sadly, or gladly, he was not with us to witness that October Alaska Day event. From it, we learned a valuable lesson, and since have stored our inventory up at least three pallets high. This gives us a fighting chance if we are taking water. It made the 2005 storm a cakewalk.

Nome and all our neighbors up and down the entire west coast of Alaska listened, and prepared, while

our radio station announcers continued providing notice of the approach of this coming storm. Monday we spent moving all paper products off the floor, boarding up the south end windows overlooking the Bering Sea and Nome's seawall, extremely susceptible to damage from flying rocks and logs. We were checking tank straps, cleaning sump pumps, checking auxiliary pumps, doing everything possible to mitigate any destruction, damage, or loss. I took a deep breath. Mother Nature, I prayed, have mercy on us.

Tuesday these warnings came more frequently, and as the storm approached with more intensity, so was the sound in the radio announcer's voice: intense. The storm was huge, and we became a hot topic on the Weather Channel. Facebook began filling with well wishes and prayers for the safety of all of us out here on the Seward Peninsula and coastal Western Alaska. Tuesday night the fore running blizzard was on us. I called one of our local taxi companies and asked them to notify me when they were going to pull their cabs off the roads. This would coincide with bar closure in order to get our patrons home safely. I prepared to drive our closing bartender, my daughter Krysta, home and, terrified, knew I had to make my way back to the bar. Ron Locke had informed me just as we were preparing to leave that he was seeing water on the floor at the south end of the basement. This was his first rodeo. I've been the girl in the basement for other events. I knew all too well what was ahead, and had been bracing myself mentally for the past two days. At 1:30 a.m. Wednesday, I picked up

my floor squeegee push broom, and took my position in the basement.

As the southerly winds push the water table up under Nome, so goes the water under the Breakers basement, and ocean content presents itself through the cement floor. By 4 a.m. the two of us were unable to keep up, pushing the incoming sea to the sump pumps, and my call went out for help. Within minutes crewmen Mike Saclamana, Tom Koyuk and Jeff Milligrock were at our side. After an hour or so, I explained to all what was going to continue to happen, and pointed out where they would see water, as I prepared to run home and try to catch a couple hours sleep. As I dozed for an hour, little did I know we lost power, and the men were loading buckets heavy with water up the stairs to send down

Bless John Handeland and the Nome Joint Utilities, the power came back on, and electric pumping resumed. By 10 a.m. Wednesday an extra pump was putting water onto Front Street through about 100 feet of hose. George Leckband stopped in to check on us, ran to pick up breakfast-lunch for our water crew, and brought back his gas generator just in case we needed it.

We called for more pumps. Randy Pomeranz came by, and went to get one of Carl Emmons's pumps. Carl Emmons - we are usually joined at the hip during these storms, but he was out of town. Brother-in-law Stacey Green and sister Mary offered help. Two young ladies, and I am sorry I didn't catch their names, patrons that afternoon, called their people who I believe are associated with Nome's newest gold mining company, Nome Gold Alaska. They brought in a new pump and hose. Mike Winkleman brought pumps and hoses. I apologize if I've missed some names, but things were getting hectic, and I was out looking for dry boots for our men.

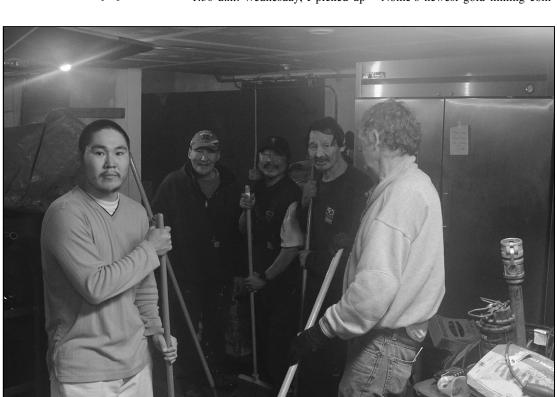

The hours dragged on. Gale force winds whipped us from the southeast, then south, and the sea surge continued. The phone was ringing with radio and TV stations from the rest of America, Arizona, California and New York looking for live feeds, skype interviews, and the like. All I could relay to them was to tell their audiences to cross their fingers and pray for all of us. We were too busy laying hose and starting more pumps, and darkness would be fast approaching. Ha! The only live feed I wanted to see was another hose hooked to another pump with water squirting out the end of it onto Front Street.

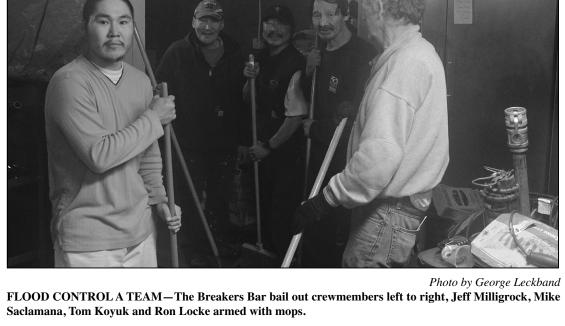

Thirteen hours of pushing— the speed at which the sea water was

still coming through the floor was high, and Dave Antonson-Ciski and Mike Goldie provided some relief to our salt water men, as they pushed water several hours toward the drains and pumps. The water boys of the Breakers were exhausted.

Seventeen hours of pushing-we had one more meal together as fresh horses, or horse, in the form of Olaf Walters, came to help us contain the incoming water. I told Ron Locke, "You get your first gold star for your first storm." Someone looked outdoors. The waves didn't seem so high. The ocean was quieting to a dull roar. The wind speed was dropping. Seawater was coming in more slowly, and we found ourselves over capacity with the pumps. Olaf and I started the slow, methodical shutdown of them, and he began dragging disconnected hoses, which were now starting to ice up, back into the bar. By 1:30 a.m. Thursday,

## **Obituaries**

#### Ella Eningowuk

Ella Eningowuk was born in Shishmaref on March 28, 1924. She actually used her baptismal date as her date of birth, May 15, 1925, and her family wanted that date on her cross since she always used that as her birth date.

She grew up with her parents William and Wilsa Allockeok in and around Shishmaref and Arctic River.

Her parents were reindeer herders, as others were in Shishmaref. She had two brothers Al (Unaliinga) and Johnson (Paniulak), and two sisters Kara Ahgupuk and Elsie Weyiouanna. Her parents also raised Koonuk Angusuc and MaryAnn Allockeok Bahnke.

She learned a lot about sewing from her mother and sisters—back then most clothing was sewn from skins. She became a well-known skin sewer and did much beautiful work for others, including David Green of Anchorage. She married Perry Eningowuk and together they had three children: Johnson, Eleanor and Al Jacob

Ella Agmaguna Eningowuk resided in Shishmaref, Nome, Anchorage, and Fairbanks and possibly many more places. She died at Alaska Native Medical Center on

She leaves behind many friends, relatives, grandchildren and great-grandchildren, too many to name but not forgotten.

She was preceded in death by her parents William and Wilsa Allockeok, her brothers Al (Unaliina) and Johnson (Paniulak), sisters Kara Ahgupuk and husband (George Ahgupuk), Weyiouanna, Ella's husband Perry Eningowuk, grandson Dallas Eningowuk and many friends and relatives.

#### **Ruth Spicer Brechan**

Ruth Spicer Brechan died peacefully in her sleep on Thursday, November 3, at the age of 95. Ruth was born July 27, 1916 in Hardscrabble, ID. Hardscrabble, coincidentally, describes much of her early years. Her adventurous father wasn't inclined to stay at home and her mother remarried and moved away. So, Ruth and her older sister Ellen were more often than not, left to fend for themselves as children.

Ruth had more challenges ahead, as her first husband was "a little too liberal with his fists." At the age of 19 (1935) Ruth took her 18-monthold son Walter Nestell, a six shooter, and a twenty dollar bill to head for the Territory of Alaska on a steamship. In Anchorage she met and married Harry Gottschalk. They moved from Anchorage to Fairbanks where their daughter Gail was born. During her time in Fairbanks she began working as a hatcheck girl, waitressing and bartending to save money for the goal of someday becoming a business

Ruth and Harry moved to Juneau for a short time, and then on to Nome. In Nome, Ruth purchased a shoe store that she renovated into the first Breakers Bar. She had a soft heart for people in need, and in Nome that was no exception. She helped the Native girls in so many ways, and received the nickname of 'Mama Ruthie.'

Sometime later she found out Harry was "running" some girls on the side in Anchorage, and as was her straightforward way, hit him upside the head with a very large frying pan and told him to get out! They divorced shortly thereafter. In Nome, Ruthie met the love of her life, Fred Brechan. He was the master mechanic for Morrison Knudsen Construction (MK). They married in Carson City, Nevada in 1951.

Much to Fred's delight, Ruth was an avid fisherman and hunter. In Nome, she tracked and shot two polar bears. She was a great camp cook and could skin better than most. Needless to say, she was always invited on Fred's hunting trips.

MK eventually ran out of work in Alaska and with that, MK asked Fred to move to Africa. In no uncertain terms Ruth said she wouldn't take the kids there. So they chose to stay in Alaska. Fred and Ruth moved to Kodiak in 1954, where they purchased a building, which became the second Breakers Bar. She and Fred went to Navy surplus auctions, picking up equipment that Fred refurbished. Soon Brechan Enterprise came to fruition. Ruth and Fred also bought a World War II barge that they named the Lex; thus, the beginning of their fishing businesses.

Together they enjoyed the challenges and adventures of sharing many other varied business ventures, including fish processing (an All Alaskan partner, that is now Trident Seafood of Kodiak), raising Brahma bulls and tree farming in Costa Rica,

gold mining, logging, home building, and many other small business endeavors. A very thoughtful venture was the elderly living home that Ruth, Fred, and Lou and Fran Iani built in 1972. It stuck in their craw

that elderly Kodiakans were being shipped off elsewhere, so they did something about it and built a 54unit complex to meet that need.

## **Trooper Beat**

On November 1, at 9:35 p.m., the Alaska State Troopers received a report of a domestic distur-bance 17.5 miles from Nome. Subsequent investigation led to the arrest of Donald Johnson, 52. of Nome, for two counts of Assault 3, Assault 4, Misconduct Involving Weapons 4, and Probation Violation. Johnson was arrested with a warrant and remanded to the Anvil Mountain Correctional Center with bail set at \$2500.00.

On November 6, at approximately 6 p.m., Marian Oozeva, 35, of Gambell, was arrested for Violation of Conditions of Release after investigation revealed that she was consuming alcohol in violation of her release conditions

On November 6, at approximately 6 p.m., Brendan Oseuk, 37, of Gambell, was arrested for a probation violation after investigation revealed that he was drinking in violation of his probation.

On November 7, at approximately 12 noon. on an outstanding Assault IV DV warrant.
Komonaseak was telephonically arraigned and released with conditions set.

On November 9, at about 6:51 p.m., Teller Search and Rescue notified AST that Kyle Komok, 26, of Teller, was missing and was last seen at about 4 p.m. on November 9, riding a four wheeler north on the Teller spit, headed for the point. Komok was seen riding on the spit with waves crashing over and almost tipping him over. Teller

Search and Rescue conducted a house-to-house search of old site Teller and also checked around the freshwater lake but did not locate Komok. Teller SAR called off their search at about 9 p.m. on November 9, due to weather conditions and

water covering the road to old site.

Teller SAR resumed their search at first light on November 10, and managed to get two 4-wheelers to the north end of the Teller spit but the

wheelers to the fold that of the feliel's pit but the searchers found no sign of Komok or the 4-wheeler. It was reported the spit was washed out at about the 1/2 way mark headed north.

Teller SAR launched a boat to check Grantley Harbor and several floating boats and debris with no results. On November 10, at about 2:30 p.m. Teller SAR called off any further searching due to deteriorating weather and water conditions. If anyone has any further information please contact AST.

On November 10, at about 3:55 a.m., the Gambell police received a telephone call from a female resident of Gambell requesting help at he home. Gambell police subsequently contacted Darrell Apassingok, 30, of Gambell, who was intoxicated and possessed a firearm. Apassingok was arrested for Misconduct Involving Weapons IV. AST investigation further revealed Apassingok pointed the firearm at two people inside the residence. Apassingok was additionally charged with two counts of Assault III. Apassingok was telephonically arraigned due to weather conditions.

#### **COAT DRIVE**

Do you have any coats collecting dust in your closet or storage? That's the question posed by folks concerned about keeping people warm this time of year. There will be a Coat-Give-Away day Saturday, November 26, from 1 p.m. - 5 p.m. at Our Savior Lutheran Church located at Fifth Ave. and Bering Street. There is a special emphasis on children- and youth-size winter coats, but any coat donations will be appreciated. Bring your slightlyused coats to the church Monday through Friday, 9 a.m. – 5 p.m., Sunday 10 a.m. - 1 p.m. or call 443-5295 for other hours. Any coats that are not given away on November 26 will be given to the Methodist Thrift Shop or other organizations in need.

## How did last week's storm compare?

# 1974 storm summary

The November 11, 1974 storm took place 37 years ago. 14-year-old John Handeland wrote this very detailed account of the damage from that "epic" storm. Nome has had several "epic" storms in its history. The November 9, 2011 storm was just another big one that Nome has faced in its 112 year existence. By the way, if you do not know the locations John described below, just ask an old timer. Then ask that old timer how they fared during the '74 storm.

Comments and history provided by Director Laura Samuelson of the Carrie M. McLain Memorial Museum.

#### 1974 Storm Summary By 14-year-old John K. Handeland

We really are having a bad disaster here. Yesterday morning around 9 a.m. Caroline Reader and I walked down to East End and then down to B&R. We made it almost all the way down to the Bowling Alley on the sea wall without being stopped. The Police finally caught up with us in back of the City Hall and asked us to leave, but when they left we continued down past the N.C. Apartments on the Sea Wall.

Well, anyway, King Island is completely totaled. The radio stations estimated that there are only about five houses left standing down there at East End. Three barges that were on storage runners down by King Island went right over them and into the village. Two of them are way in the back and one just barely crossed the road. The two tin-covered Standard Oil buildings are not standing. All you can see is a few pieces of tin floating around and then the floor.

Mel Baxter's place (the long skinny one that was in front of Chip Swanson's) was parallel with the road and it is now perpendicular with it and is almost back by Chip's

I don't know if you knew where Ellanna's place was, but all that is left of it is the east and west wall. The waves went right through the south end and knocked out the north end. All that is standing in the house is the stairs going up to the second floor.

About the only buildings left standing, that I can remember, at the end of town are the Sunarit Co-op Building where they do their ivory carving, Karen Baldwin's place, Chip Swanson's place, and I can't think of the others.

Anyway, we walked down the sea wall from the new State Building to the Bowling Alley.

Here is an individual report on each building:

STATE BUILDING — Broken windows on the lower floor and at least a foot and a half of slush, etc. on the floor. People were shoveling it out when we walked by there around 10 a.m. yesterday.

CAVOTA'S STORE — The back part of his basement was ripped out, but nothing else as far as I could tell. RCA ALASCOM — Basement full of water which ruined thousands of dollars worth of communications equipment for the satellite communications dish which was just recently installed. The first night of the storm all communications lines except for one were knocked out and they have been pleading with people to limit calls to no more than three minutes so that other people have a chance to use them in case of emergencies. The salt water ruined the batteries for the dish too and they had to have new batteries along with other equipment shipped in from Anchorage yesterday afternoon.

ALASKA NATIONAL BANK OF THE NORTH, MINER AND MERCHANTS BRANCH —basement where they keep all their permanent records is flooded. The waves broke Floyd Breeden's (the manager) office windows to the south and threw his desk, chair and file cabinets all up against the north wall. All receipts, etc., which were laying out on the first floor were also dampened.

US POST OFFICE/STATE JAIL - Jail had four feet of water in it, but they have pumped most of it out. They evacuated the prisoners up to Carter's Pollyanna Apartments, behind the Lutheran Church, and they were taken by plane to Fairbanks yesterday afternoon sometime. The Post Office had some water in it and they have set up an emergency Post Office in the Multipurpose Room here at the school. They are accepting letters and selling stamps only.

POLAR BAR AND CURIO SHOP - The trailer that was built into the back end of the bar is completely totaled. You could see the furniture still in there. The refrigerator door was open and cheese, etc. was falling

out of it. I guess the bar wasn't too badly hurt except for loss of stocks in the basement area of the building. **BOARD OF TRADE BAR** -Water and waves knocked out the windows and partition at the rear of the building. I guess they were pretty messed up inside to. Rumor has it that Jim West is sitting in the bar with a loaded shotgun to prevent

any more looting.

CARRIE M. MCLAIN MEMO-RIAL MUSEUM/LIBRARY- Not damaged as it is well away from the sea. The buildings between the Board of Trade and the Museum/Library were not damaged either.

NORTHERN COMMERCIAL COMPANY - Basement completely flooded, ruining the winter stock. Back of the building is just ragged. There are three or four of the big rocks off the sea wall right up next to the rear of the building. They had their big red delivery truck parked in the back and when they went out this morning it was alongside the building next to the Museum/Library. Frank Couch was saying to someone that he wasn't sure if the N.C. would want to rebuild here. Officials will be coming on the first flight possible to assess the damage today.

ALASKA AIRLINES NUGGET INN III - Sea view Room and Gold Dust Lounge walls are completely knocked out. All the furniture is up against the north walls. The big polar bear rug that was hanging on the wall is just one big wet mess. I have heard that people were sitting in the lounge making bets as to when the big plate-glass windows would cave in.

BREAKERS BAR — Back was totally knocked out. The pool table came through the rear partition when a 30 ft. wave (according to Jean Silvernail who was in the bar at the time) hit the building and pushed all of the people in the bar out on the street.

**ANCHOR TAVERN** — No visible outside damage, though I believe that they had some basement flood-

MARUSKIYA'S - Hardly any outside or inside damage. The only thing that they lost was a little shed made out of tin that sat to the rear of the establishment.

YELLOW CAB CAFÉ AND CAB **STAND** — Nothing noticeable.

NOME CITY HALL — Building structure was weakened considerably. Cars that were sitting behind the City Hall are all smashed together in one heap. The City Hall moved all their records that they could, along with their computer to the Fire Hall. City Hall offices will temporarily be housed in the City Power Plant out by the airport, and the computer will be housed at the Fire Hall.

There were also a number of cars smashed together between the Board of Trade Bar.

#### NOME LIQUOR STORE -

Lost one of their warehouses on the ocean side. Not too much was lost, though. C.J. Phillips (the owner) is out of town and the guy who is running it for him was giving away free

Ruth belonged to the Alaska Pioneers Igloo #1 in Nome. She and Fred were the first couple to be inducted into the lodge together. After she came to Kodiak, she was instrumental in forming the first women's Pioneer Igloo, Igloo #17, and the men's Pioneer Igloo #18 in Kodiak. She showed her compassion and grit in insisting that the igloo was open for all who qualified, championing equal rights before it was popular to do so. Ruth was very active in the Milliken's, an honorary member of Beta Sigma Phi, an Eastern Star, and a member of the Natalia Shelikof Alaska Chapter of Daughters of the American Revolution (Daniel Boone descendent).

A few of her many other accom-

plishments included standing in front of a bull dozer and making such a ruckus that it kept the Erskine Home (Baranov Museum) from being torn down after the 1964 earthquake and tidal wave. She always supported Little League and youth programs, and helped to make the fairgrounds possible. Her bar was always open on Thanksgiving and Christmas, giving anyone who didn't have family or a place to go a place to hang their hat. Ruth made sure that Brechan Enterprises employed local teens with summer jobs, enabling them to save money for

that is still in place today.

Ruth led a very fulfilled, colorful and interesting life. She was a true pioneer lady with lots of spirit. Her recently published autobiography,

college or trade schools, a tradition

*Trails and Tales of a Pioneer*, speaks of a life of true pioneer feistiness.

Her last days were blessed with the compassionate care of many dear friends, caregivers, and family. She will be deeply missed. Ruth was preceded in death by her son Walter Nestell and her beloved husband Fred C. Brechan. She leaves behind her daughter Gail St. Pierre (Martin), and the children of Fred, Mike and Jean Brechan. She also leaves many grandchildren, great-grandchildren, and great-grandchildren, and great-grandchildren.

Her memorial service was held at the Elks at 3:30 pm November 14. Her book was available and all proceeds went to the woman's crisis center. The "old" Breakers bar liquor was served and all proceeds from a "little cheer" went to the Elks renovation. had been a long haul for me. While there is no picture of Ruth Brechan, I know she was up there where it wasn't quite as stormy or turbulent, without the roar of the ocean behind her, tending bar just as she was back in 1948 when she built and started the Breakers Bar, and I know Herbie was sitting there right with her telling about when he bought the bar back in early 2000, and how it was back in 1974. I'll bet he was introducing to her all our friends, and I know they had a pretty good crowd...Dave Wayne Wininger, Tom Trainor, Dick Sackett, Eddie Devine, Jim and June West, Valerie and Stan Sobocienski, Albro Gregory, Byron and Jean Silvernail, Stud Duck Jack O'Neal. Eliot Staples, Pete Larsen, Harold Pilcher, Al Doyle, Clayton Baldwin, Bob and Grace Herman, Virginia White, Stan Fricke Sr., Bill Oman, Lonnie O'Connor, Mike Harris, Gilbert Pelewook, Blinky Tommy Leonard, Dennis Warnke, and many more. All have been with us as we weathered storms of earlier years. Well? How did we do, guys? Damn

good, I'd say.

We had no stock loss, no damage; we have a very clean basement floor, and many sore backs and shoulders. We are extremely grateful, extremely We couldn't have come through this without many community members sending their prayers, bringing the sweat of their backs, and tools of their trade. The ol' building, she's still standing strong and at the ready for the next big wave. Thank you, Nome! And so to our new friends, dear friends and patrons, from the staff of the Breakers Bar, in sincere appreciation of your help and support, we hoist a glass of good cheer. This one's for you.

If you are a stranger, old timer, gold miner, or just curious and find yourself in town, stop in and see us. We're at the Breakers, on the beach, in Nome.

Cussy and the crew November 2011, Nome

## • 1974 Storm summary

continued from page 17

pop from that warehouse that has blown down. The pop was just sitting out there in the open and the kids were stealing it anyway, so he figured he might as well give it away. Mayor Bob Renshaw stopped him, though, as the kids were not supposed to be on that side of the street and they were also getting into the liquor.

**BÉRING SEA SALOON** — Just damage to basement supplies.

BOWLING ALLEY/NOME PO-LICE STATION — Back and west wall were partially knocked out. There were a couple of kids in the building playing after the storm with the bowling equipment, which was broken down in the first place. The police station lost a number of records due to water.

**B & R TUG & BARGE, INCOR-PORATED** — Lost an \$80,000 Cat into the jetty. Propane tanks and other equipment were floating around all over the dock area.

CITY POWER PLANT — The power plant was in danger of being flooded at the height of the storm, but due to the efforts of a number of volunteers it was saved. They pumped out most of the water and most of the city is back on power now. People were out there sand-

bagging the plant. A couple of the generators just won't start though and they are having some line problems.

I have been here at the school most of the time and haven't spent too much time at home. I came in at 11 p.m. on Monday evening and didn't leave the building again before Tuesday morning at 12:40. I came back at 1:20, left at 5:40, came back at 6:00, left at 9:00 p.m. Tuesday evening and then came back on Wednesday morning at 8:45, left at 9:00 or so and came back at 10:45 a.m. on Wednesday and haven't left since. It is currently 3:30 a.m. on Thursday.

Here are some statistics on numbers of people we have had through the school the last couple of days:

November 11 — 48 sleepers during the night

November 12 — an estimated 350 people came through the building just to warm up, have a cup of coffee, a meal, etc.

November 12 — estimated sleepers on November 12 was 38

November 13 — People coming through the building for coffee etc. wereover 400

We haven't taken a count of how many people are sleeping here tonight.

(This is just junk I am putting down, but since you lived here before and

you might be interested in some of

The City Sewage Treatment Plant was out of order for a while today but they finally by-passed it this afternoon sometime, so we can again use the toilets.

The water is contaminated due to the sea water coming into the Snake River, so the City has sent water trucks up to Moonshine Springs to get water and they have delivered one hundred gallons to everyone who was on the truck delivery route. Anyone else had to go to the fire hall to get water.

I was thinking of calling you for a while but when I hear that the emergency rates were \$3.50 a minute to Anchorage I said, "Forget it!" They brought the rates up so high so people wouldn't be as apt to make calls and talk for a long time.

There was an emergency City Council meeting in the Board Room area tonight. The City Council met with the Disaster Office people, Red Cross people, etc. The Chief of Police has asked for an ordinance that would put a curfew of everyone from 10p.m. to 6 a.m. to keep them off Front Street. They thought that would give the businesses a chance to board up their buildings. But the City Council didn't feel this was that necessary, so they passed it only for three days. The police had also re-

quested an ordinance that would close the bars for three days to a week, but that was turned down.

Kids have already gone and got into the buildings. The first night of the storm some kids went into the Nugget Inn III and broke open the cigarette machine. If anyone had a sack of cigarettes they could make a fortune around, this school alone. One guy was so desperate (he was drunk also) for a cigarette that he started smoking the butts! Everyone is begging for cigarettes.

The only store open is Stop Shop and Save. Oh yes, so is the Merc for 4 hours per day and M'Lord and Lady. Stop Shop must have made a fortune as they were the only grocery store open until the Merc got clearance from the National Guard to reopen. They had to do this, as Front Street was closed and the National Guard was in charge.

Enclosed are copies of some stories that will appear in the *Anchorage Daily News*. There is this reporter, Howard Weaver, who has set up his headquarters in our office here, and he wrote these.

I haven't been at school once this week. On Monday morning this storm was brewing and the roads out to Nome-Beltz were so slippery that one bus slid off the road. Fortunately, he had already dumped off all the kids at the school. With one bus

off the road, one that wouldn't start, there was just Barrow's bus. The bus I catch is the last one and Barrow came back and said that he just wasn't going to risk taking another load out, so I stayed here at the school and worked. There were about 25 or 30 other kids that didn't get to school. Sure glad I missed the bus, as I don't miss school that much and I would have missed out on the beginning of the disaster.

It is now 4 a.m. and only two more hours until I have to wake up a couple of people. Byron Silvernail and that reporter from the *Anchorage Daily News* want to get up around 6:00 or 6:30. Byron has to go over to the fire hall and start working on the power lines again. He hasn't got too much sleep the last couple of days. He just has been too busy working to have any time to sleep. The reporter wants to go out and get some pictures, I guess.

Well, this will have to wrap up this letter. I am about to go to sleep here at the typewriter, so I had better go get a cup of coffee and work on some other things.

Will write again when more details are available and we know exactly what is happening.

—John Handeland
